

CYBER ALERT: **YOUR EMPLOYEES** **ARE AT RISK.**

Your employees are your frontline defenders against cyberthreats, but they're also the most vulnerable targets. Is your business prepared to fend off employee-based attacks? Here's what you're up against:

PHISHING ATTACKS

Cybercriminals craft sneaky emails to trick employees into revealing private data or clicking a malicious link.

SOCIAL ENGINEERING

This manipulation technique exploits human psychology to trick employees into compromising security.

CREDENTIAL THEFT

Attackers are after your teams' login credentials to infiltrate company systems.

RANSOMWARE

Hackers use malicious software to encrypt your critical data, demanding a ransom payment for its release.

MALWARE

Malicious software designed to infiltrate devices and networks can be hidden in suspicious email attachments.

INSIDER THREATS

Whether it's a disgruntled employee or a simple mistake, insider threats can exploit their access to sensitive data.

REMOTE WORK VULNERABILITIES

Working on-the-go can introduce private data to a new set of risks from unsecured environments.

Defend your team.
Defend your business.
Reach out to get started.
